

Peer Document Review Cloud Solution for Leading Global Research & Innovation Organisation

DANONE NUTRICIA RESEARCH STREAMLINE THEIR SCIENTIFIC RESEARCH AND GOVERNANCE REVIEWS PROCESS WITH SOUTRON

Danone Nutricia Research is the global research and innovation organisation behind the specialised nutrition division of Danone. Operating in Europe, North America, Asia and Latin America, with over 120 years' experience. Science is at the very heart of their nutrition and health commitment, focused on delivering evidence-based specialized nutrition to infants, young children, pregnant women, patients and the elderly.

As part of their research process, Danone Nutricia Research has an internal review process that ensures high quality scientific output.

To streamline the reviews and make them more efficient, they have automated these with Soutron's Document Review system. By offering a simple set of workflows with automated notifications and a personal account where tasks and workflows can be managed, the system improves the traceability, decreases time spent on the workflows and makes it possible to further optimise the process itself.

The main reasons for choosing Soutron's tailor-made solution were the options to get a customised, user-friendly interface, a simultaneous review process with multiple reviewers instead of a hierarchical approach, and an integrated solution with the already existing publication library.

User feedback has been very positive. Due to the flexibility of adapting and improving the system during the building phase, there is now a high-quality solution that is fast and easy to use.
