

SOUTRON INFORMATION MANAGEMENT SYSTEM – GO BEYOND...

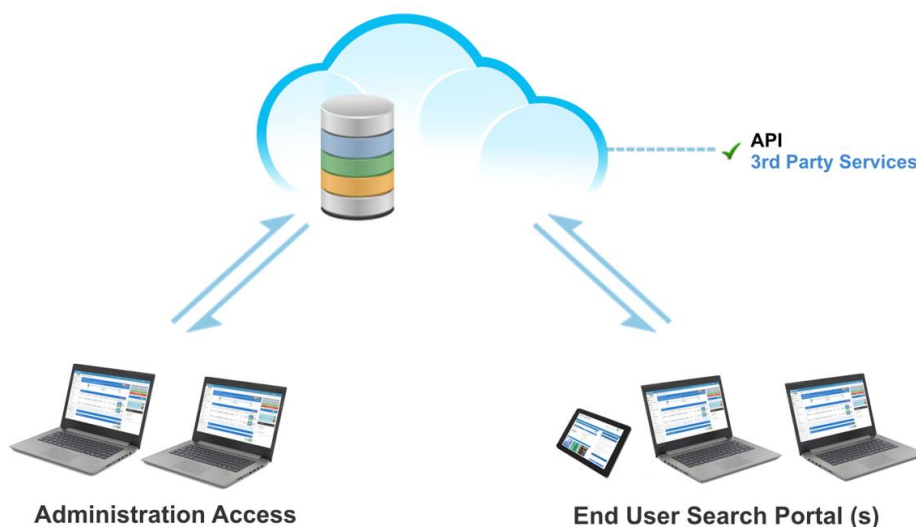

Soutron's web-based information management system provides Library, Knowledge and Archive collections management functions in a single database solution. Providing self-service functionality, encouraging collaboration, providing document submission review processes and the capture of feedback and comments.

It reduces the pressure on staff and increases access to knowledge from any device including mobile smart phones and tablets.

- Built on over 30 years' of library and knowledge management expertise
- Out of the box, easy to customise, flexible to adapt to future needs
- Continuously developed, fully managed and supported
- Driven by our passion to provide the best Information Management service

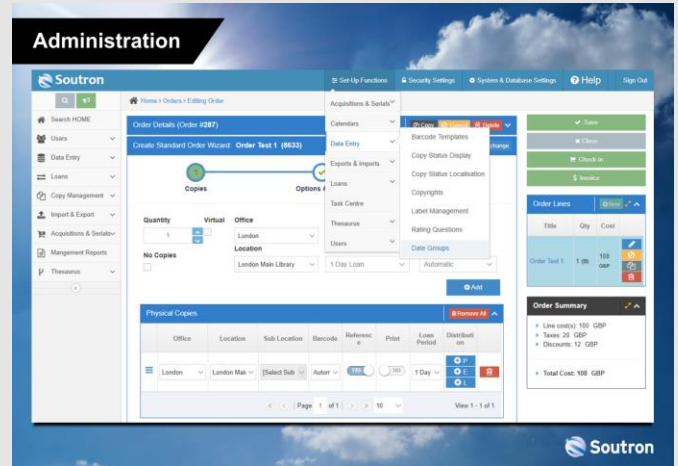

A fully managed application engineered to take full advantage of new web technologies including HTML5 leading to improved performance and greater flexibility in presentation of results across all types of devices.

Fast Cloud Based and Mobile Friendly Information Management Software

SEARCH PORTAL

Soutron's Search Portal, gives control over design, layout and content to aid “marketing” of information services, offering more customisation plus faster performance.

Soutron is a single multi-purpose application, where the database can:

- store data for library, archive collections and knowledge
- manage physical & digital items, PDFs, images, audio & video
- streamline workflows for each application
- capture and process data manually, via scanners & automated import schedules
- present information on desktop and mobile devices in a responsive web browser layout

*Designed for Desktop, Tablet & Mobile*

Single or multiple search portals are easily created to cater for the information needs of discrete user communities. Staff are able to direct content to the customers that it serves and present web pages with appropriate content and links to internal or external resources.

THE LATEST IN WEB TECHNOLOGIES

Soutron is a comprehensive solution for organisations large or small, with the facility to apply rich functionality across all aspects of library, knowledge and archive within **one flexible database**.

Simply put, it offers better value for money because it can do more than a legacy system, it takes full advantage of the latest web technology and offers a simple **unlimited user licence**.
