SOUTRON MAKING HEALTH INFORMATION MORE ACCESSIBLE

Innovation and technology development at Soutron is continuously targeted directly at the needs of information professionals and their end users within health, government and non-profit organisations. Soutron creates custom solutions that are fully supported, to provide simple and easy access to all of your content.

Our solutions comprise a number of functional modules. Each module can be used independently, or integrated with third party systems and infrastructure, as well as part of a fully integrated system.

WE HAVE DEVELOPED UNIQUE FLEXIBLE SOLUTIONS FOR HEALTHCARE

EVIDENCE BASED RESEARCH CLINICAL GUIDELINES QUALITY STANDARDS	ARTICLES BIBLIOGRAPHIC REFERENCES ELECTRONIC RESOURCES	VIDEOS TRAINING MATERIALS CORPORATE DOCUMENTS

- At Soutron's core is a very flexible database - an essential component of any Digital Knowledge Store. It is not restricted to bibliographic data. It integrates easily with other systems via Web Services and APIs to provide easy data exchange.
- The relational database design makes it easy to configure to meet data management needs for evidence based research, clinical guidance, skills and expertise to support a Knowledge Sharing culture.
- Comprehensive library workflow modules are fully integrated into the Soutron core database.
- Additional data sources can be added at any time and be included in an enterprise search facility.

Soutron as a business brings together technologies to create custom solutions. Our database software provides the backbone for an integrated coherent information strategy, for single and multi-site libraries. We provide consultancy and technology, library science and metadata skills to customise solutions to each client's particular needs.

SEARCH PORTAL

Create a unique entry point / portal for your users, researchers and visitors, across your organisation and outside. Simplify their access to your content and services and provide My Account facilities to help them self manage their searches and loans, set up RSS feeds, get the latest Library titles and guidelines, how to access your services and more.

DIGITAL CONTENT DISTRIBUTION

The growth of digital content (eBooks and eDocuments) requires new processes to streamline access and distribution either with or without DRM, to secure content when it has left the organisation. Soutron's Digital Server (SDS), is purpose built to handle digital content and integrates with other systems including Soutron modules. SDS can be a standalone platform or integrates with a third party system and offers freedom to acquire digital content from any provider, as well as being able to publish and distribute internally generated content.

DOCUMENT REQUEST SERVICE & INTER LIBRARY LOANS

Significant efficiencies in Document Delivery and Document Request services, can be made using Soutron's ILL & Document Request modules. These are fully integrated with British Library and can be set up with any other external supply service in real time. It saves time and improves control over costs and service levels.

Soutron's ILL when used with Discovery Services makes the transition between Search and Request seamless for the end user and is a valuable addition to the entire process.

NEXT STEPS

Operational assistance is delivered from Central England offices by Soutron, using knowledgeable librarians who have implemented and understand the NHS organisation structure, as well as the technologies that are applied.
